

Order Picker Forklift Parts

Order Picker Forklift Part - Order preparation operation or likewise called order picking as it is more commonly known is a process used within warehouse operations and consists of personnel referred to as order pickers. The order picker's job is to collect and take articles in certain quantities to complete the client's orders prior to shipment. Order picking is an easy warehousing method. The efficiency in which this job is accomplished could be directly related to the productivity of a supply chain. Thus, order picking is one of the most controlled logistic methods. Order picking falls within the category of the warehouse management system.

There are several specific types of order picking. The main kinds consist of: pick to box method, wave picking method, piece picking or picker to part method, sorting systems method and zone picking method.

The pick to box method consists of the order picker just filling the boxes with things that are from their specific station. The box then moves on to other locations until the order is finished. In this particular method, there is no movement of the order picker staff. In the wave picking method, the order pickers move round to gather the needed products for several orders. The piece picking or picker to part method is similar where the order pickers or picker move to collect the items required but for one order only.

There is no movement by the order picker in the sorting systems method. Rather, stuff are brought to the order picker by an automatic system like a conveyor system or an automatic storage system. In the zone picking method, each order picker is assigned to one specific area. They are responsible for just realizing order picking within this particular area.
